

Stock IT User Manual

A Practical Guide for Client Admin and Staff Accounts

Developed by Ralph Anthony A. Segador
Reliable Automation Solutions (RAS)
ralph.segador03@gmail.com • 09941475924

What's In This Manual

This manual is written for the two people who actually use Stock IT day to day: the **Client Admin** (the business owner running their own inventory) and **Staff** (team members/resellers working under a Client Admin). It does not cover the Super Admin role, which is a platform-management role separate from running a business on Stock IT.

Terms of Service

This is a general document and not a substitute for legal advice specific to your business.

1. Ownership

Stock IT is developed and operated by Ralph Anthony Segador, doing business as Reliable Automation Solutions ("RAS", "we", "us", "the Developer"). All rights in the Stock IT application not otherwise granted to you under these terms are reserved by Ralph Anthony Segador / RAS.

2. Acceptance of Terms

By creating an account or using Stock IT ("the Service"), you agree to these Terms of Service. If you're signing up on behalf of a business, you're confirming you have the authority to bind that business to these terms.

3. What Stock IT Is

Stock IT is an inventory, point-of-sale, and business-management tool. Each Client Admin account represents an independent business ("tenant"); your inventory, sales, suppliers, and team are kept separate from every other tenant on the platform.

4. Accounts

You're responsible for keeping your login credentials confidential and for all activity under your account. A Client Admin is responsible for the staff accounts they create, including approving who has access and revoking it when appropriate. Notify us promptly if you suspect unauthorized access.

5. Acceptable Use

You agree not to use the Service to store or process unlawful content, attempt to access another tenant's data, interfere with the Service's operation, or reverse-engineer the platform beyond what's permitted by law.

6. Your Data

You own the business data you put into Stock IT (inventory, sales records, supplier details, and similar). We don't claim ownership of it, and we don't sell it. See the Privacy Policy for how it's handled and stored.

7. Fees

Any applicable fees, billing cycle, and payment terms will be communicated to you directly and are not currently defined within the app itself.

8. Termination

You may stop using the Service at any time. We may suspend or terminate an account that violates these terms or poses a security risk to the platform or other tenants. Where reasonably possible, we'll give notice first.

9. Service "As Is"

The Service is provided "as is" without warranties of any kind, express or implied, including fitness for a particular purpose or uninterrupted availability. We aim for reliability but can't guarantee the Service will be error-free at all times.

10. Limitation of Liability

To the extent permitted by law, Ralph Anthony Segador and RAS are not liable for indirect, incidental, or consequential damages arising from use of the Service, including loss of business data, revenue, or profits.

11. Changes

We may update these terms from time to time. Continued use of the Service after changes take effect constitutes acceptance of the revised terms.

12. Contact

Stock IT is developed and maintained by Ralph Anthony Segador of Reliable Automation Solutions (RAS). Questions about these terms can be directed to your Stock IT administrator, or to Ralph Anthony Segador / RAS directly at ralph.segador03@gmail.com.

Privacy Policy

This is a general document and not a substitute for legal advice specific to your business.

1. Information We Collect

Account information: name, email address, username, contact number, and address (address is optional). Business data you enter: inventory items, suppliers, purchase orders, sales transactions, and related records. Activity information: sign-in and sign-out timestamps, for security and audit purposes.

2. How We Use It

To provide and operate the Service, authenticate accounts, enforce role-based access within your business, generate the reports and summaries visible in the app, and maintain security (e.g. the login activity log available to admins).

3. Where It's Stored

Data is stored using Google Firebase (Firestore and Firebase Authentication), hosted on Google Cloud infrastructure. Access is restricted by tenant: your business's data is isolated from every other business using the Service, enforced at the database level, not just in the app's interface.

4. Data Sharing

We do not sell your data. We do not share it with third parties except: (a) Google/Firebase, as our infrastructure provider, (b) if required by law, or (c) with your explicit direction.

5. Data Retention

Your data is retained for as long as your account is active. If you'd like your account and associated data removed, contact your Stock IT administrator or Reliable Automation Solutions.

6. Your Rights

You can review and update your own profile information at any time from My Profile. You can request a copy of, correction to, or deletion of your data by contacting your administrator.

7. Cookies & Local Storage

The Service uses your browser's local storage only for maintaining your signed-in session (via Firebase Authentication) — not for advertising or third-party tracking.

8. Children's Privacy

Stock IT is a business tool and is not directed at, or intended for use by, individuals under 18.

9. Changes to This Policy

We may update this policy from time to time. Material changes will be reflected here with an updated context; continued use of the Service after changes take effect constitutes acceptance.

10. Contact

Questions about this policy can be directed to your Stock IT administrator or Reliable Automation Solutions directly at ralph.segador03@gmail.com.

How Stock IT Protects Your Data

Stock IT has three account types: **Super Admin**, **Client Admin**, and **Staff**. This manual covers the last two, since those are the roles used to actually run a business day to day. But it's worth understanding where the Super Admin fits in, since it directly affects your privacy.

The Super Admin controls who is allowed onto the platform — not what's inside your business.

The Super Admin's job is account-level: approving new Client Admin sign-ups and managing platform access. **The Super Admin cannot see, open, or access any Client Admin's individual inventory, sales records, pricing, staff list, or any other business data.** Every business's data is kept completely separate (isolated at the database level, not just hidden in the interface), and only that business's own Client Admin and their staff can see it.

In short: think of the Super Admin like a landlord who controls who gets a key to the building, but who does not have a key to your unit.

Part One

Client Admin Manual

This section is for you if you're the **business owner** using Stock IT to run your own inventory, sales, and team. As a Client Admin, you have full control over your own business's data — nothing here is shared with or visible to any other business on the platform.

1. Getting Started

Creating Your Account

Go to the Stock IT sign-in screen and choose **Sign Up**. Signing up this way always creates a new **Client Admin** account — a brand-new, empty business ready for you to set up. You'll be asked for your email, a password, your full name, a username, and a contact number.

New accounts need a quick approval from the Super Admin before you can sign in for the first time — this is a one-time platform-access check, not a review of your business data (there isn't any yet).

Signing In

Enter your email and password on the sign-in screen. If you've forgotten your password, use the **Forgot password?** link — you'll get an email with a reset link.

Your Sign-In Screen Branding

You can personalize your own logo and color theme without affecting anyone else's account — covered later in **Team Access**.

2. Your Role as Client Admin

As a Client Admin, you can:

- Manage your own inventory: add, edit, and remove items.
- Set base cost and selling price for every item (markup is calculated for you).
- Create staff accounts and assign them their own separate inventory to sell.
- View sales and profit reports for your whole business, including broken down by staff member.
- Manage suppliers and purchase orders.
- Customize your own branding (logo, color theme, fonts).
- Review a full activity log of what's happened across your account.

3. The Overview Dashboard

This is the first screen you see after signing in — a quick snapshot of your business:

- **SKUs Tracked, Units on Hand, Inventory Value, Low Stock Alerts** — your inventory at a glance.
- **Units by Category** — a chart showing what you stock the most of.
- **Reorder Watchlist** — items at or below their reorder point, with a quick "Receive" shortcut.
- **Profit Tracker** — total profit, revenue, cost of goods sold, and margin from completed sales, plus your top items and recent sales by profit.

- **Staff Inventory Value** — the total value of stock currently out with your staff, broken down person by person.

4. Point of Sale (POS)

Use POS to ring up sales directly from your own inventory:

- Search or tap an item to add it to the cart.
- Adjust quantities with the +/- steppers.
- Tap **Confirm Sale** — you'll get a confirmation prompt before anything is finalized, so accidental taps can't complete a sale.
- Once confirmed, stock is deducted automatically and a receipt appears.

5. Inventory Management

The Inventory page lists everything you stock. From here you can add a new item, edit an existing one, record stock movements (receive/issue), and see running totals for cost, selling value, and estimated profit at the bottom of the table.

Adding or Editing an Item

Fill in the SKU, name, category, quantity, reorder point, location, and assign one or more suppliers. Pricing is covered next.

Multiple Suppliers per Item

An item can be linked to more than one supplier — useful if you can source the same product from different vendors. Just check every supplier that applies when editing an item.

6. Pricing: Base Cost, Selling Price & Markup

When you add or edit an item, you enter two numbers directly:

- **Base Cost** — what the item costs you to acquire.
- **Selling Price** — what you charge customers.

Markup is calculated automatically from those two numbers — shown as both a peso amount and a percentage, read-only, updating live as you type. You never have to calculate it by hand.

If a Selling Price is lower than the Base Cost, the markup shows in red as a quick warning that the item would sell at a loss.

7. Suppliers

Keep a list of who you order stock from, including contact details and typical lead time (how many days delivery usually takes). Lead time feeds directly into the Delivery Times report.

8. Purchase Orders

Under Stock Management → Orders, place a purchase order with a supplier for a specific item and quantity. An order can later be marked **Received** (which adds the stock and logs it) or **Cancelled** (no stock impact).

9. Categories & Zonal Locations

Organize your inventory into your own categories (e.g. "Beverages", "Cleaning Supplies") and physical zones/locations (e.g. "Aisle 3", "Back Storage"). These are fully customizable to match how your business is actually organized.

10. Staff Inventory (Assigning & Returns)

Each staff member has their own separate inventory — not a shared pool. You decide what they carry.

Assigning Inventory

Go to **Staff Inventory**, pick a staff member, and use **Assign Inventory**. You can add several different items to one assignment before submitting — pick an item, set the quantity and base cost, add it to the list, and repeat for as many items as you want, then submit them all together. This moves stock out of your own inventory into that staff member's own inventory.

Staff Set Their Own Selling Price

Once assigned, a staff member sets their own selling price on their copy of the item (their markup, their choice) — they can never change the base cost, quantity, or any other detail you set.

Returns

If a staff member gives back some or all of an assigned item, you can process the return from Staff Inventory — this moves the returned quantity back into your own inventory correctly.

11. Sales Reports

Sales History shows every completed transaction across your whole business, with search by item/SKU, date range filtering, and a breakdown of total sales per staff member — useful for comparing performance. Every sale can be exported as CSV, PDF, or printed.

12. Delivery Times Report

Shows, per item and supplier, when stock was last received, how much, and whether you're On Track, due to Reorder, or a delivery looks Overdue based on that supplier's lead time. You can override the automatic status manually if needed, and expand any row to see the full delivery history for that item.

13. Transaction History

A complete, chronological ledger of every stock movement — receiving, issuing, sales, cancellations, purchase order receipts — all in one place, searchable and filterable by date and item.

14. Team Access (Staff Accounts & Branding)

Creating a Staff Account

From Team Access, use **+ Add Staff**. Fill in their email, a temporary password, and their details. Their account is active immediately — no separate approval step, since you're the one vouching for them.

Removing a Staff Account

You can revoke a staff account you created at any time from the same screen. This immediately removes their access.

Branding Your Portal

Customize your own logo, color theme (8 presets), font, and even the text and panel colors — changes only apply to your account, never to other Client Admins or the public sign-in screen default.

15. Activity Log

A full audit trail of what's happened in your business: logins/logouts, staff creation, inventory changes, price and markup changes, sales, and report downloads. Filter by user, role, activity type, date range, or item.

16. My Profile & Password

Update your own name, username, contact number, address, and photo any time from My Profile. Change your password from the same screen — you'll need to confirm your current password first.

Part Two

Staff Manual

This section is for you if you're a **staff member** (reseller) working under a Client Admin's business. You have your own separate inventory to sell from, with your own pricing — here's how it all works.

1. Getting Started

Unlike a Client Admin, you don't sign yourself up. Your Client Admin creates your account directly and gives you your email and a temporary password. There's no separate approval wait — your account is active as soon as it's created.

Sign in with the email and password your Client Admin gave you. You can change your password any time from My Profile once you're in. If you forget it, use **Forgot password?** on the sign-in screen.

2. Your Role as Staff

As staff, you can:

- View and sell from your own assigned inventory — never your Client Admin's full inventory, and never another staff member's.
- Set your own selling price on items assigned to you (your Client Admin sets the base cost; you choose your own markup on top).
- Ring up sales through Point of Sale.
- Return assigned stock you no longer want to carry.
- View your own sales history and profit.

You cannot add, copy, or remove inventory yourself, and you cannot see other staff members' stock, pricing, or sales — only your own.

3. The Overview Dashboard

Your dashboard focuses on your own numbers:

- Inventory stats scoped to just your own assigned stock.
- **My Sales** — your own total revenue, total profit, and margin, plus your recent sales one by one.

4. Point of Sale (POS)

Works exactly like it does for a Client Admin, except the catalog only shows items assigned to you:

- Search or tap an item to add it to the cart.
- Adjust quantities with the +/- steppers.
- Tap **Confirm Sale** and confirm the prompt to finalize.
- Stock is deducted from your own inventory, and a receipt appears.

5. My Inventory

Shows only the stock your Client Admin has assigned to you. You'll see the base cost they set (locked, not editable), your quantity, and your own selling price and markup.

Updating Your Price

Tap the price icon on any item to open a simple screen: the base cost is shown but greyed out, and you enter your **Selling Price**. Your markup (peso amount and percentage) is calculated automatically as you type — it turns red if you accidentally price below cost.

6. Returning Items

If you want to give back some or all of an item's quantity — maybe you're not selling it, or you're leaving — use the Return button on that item. Enter how many units you're returning.

Your return reduces your own stock right away and is logged for your Client Admin to see. Crediting it back into their own inventory is a step your Client Admin completes on their end, so the transfer is always confirmed by the person receiving the stock back.

7. My Sales

A dedicated page listing every sale you've personally rung up, with date, time, and totals. This is your own record — you cannot see other staff members' sales, and your Client Admin cannot see your itemized inventory choices beyond what you've sold.

8. My Profile & Password

Update your name, username, contact number, address, and photo any time from My Profile. Change your password from the same screen — you'll need to confirm your current password first.
