

STOCK IT

Complete User Manual

A step-by-step guide to every tab and feature —
Point of Sale, Inventory, Multi-Shop, Orders, and more.

Table of Contents

1	Overview (Dashboard)
2	Point of Sale (POS)
3	Inventory
4	Barcodes
5	Staff Inventory
6	Suppliers
7	Categories
8	Zonal Locations
9	Orders
10	Restock
11	Shops
12	Sales History
13	My Sales (Staff)
14	Restock Records / Delivery Tracking
15	Team Access & Approvals
16	Activity Log
17	My Profile

1. Overview

Your dashboard — stock health and profit at a glance

The Overview tab is the first thing you see after signing in. It summarizes your whole shop's health in one screen.

What you'll see

- Total items, total stock value, and low-stock count
- **Profit Tracker** — Total Profit, Cost of Goods Sold (COGS), Profit Margin, and Inventory Value, updated automatically as sales happen
- A **low-stock watch list** showing which items are at or below their reorder point, with a "Receive" shortcut for each

TIP

If you use Multi-Shop, everything on this page — the stats and the low-stock list — reflects only the shop you currently have selected. Switch shops from the sidebar to see a different shop's numbers.

Reading the low-stock list

1. Each row shows the item's current stock and its reorder threshold, e.g. "19 Piece / reorder at 3 Pack".
2. If the reorder point was set in a unit other than the base unit (like Pack instead of Piece), it's shown with that unit label so the numbers stay clear.
3. Click **Receive** next to any item to jump straight to adding stock for it.

2. Point of Sale (POS)

Ring up sales, one item at a time

How to make a sale

1. Go to the **Point of Sale** tab.
2. If you use Multi-Shop, confirm the shop selector at the top shows the correct shop — every sale and stock deduction applies to whichever shop is selected here.
3. Find the item you want to sell — search by name or SKU, or scan its barcode with a paired Bluetooth/USB scanner.
4. If the item sells in more than one unit (like Piece and Pack), pick the unit you're selling before adding it — the price shown updates to match.
5. Click the item to add it to the cart. Repeat for every item in the sale.
6. Adjust quantities directly in the cart if needed.
7. Enter the **Bill** (amount received from the customer).
8. Confirm the **Change** shown is correct.
9. Click **Confirm Sale**.

TIP

The Bill field is required and must be at least the sale total — this is what makes the Change calculation possible. If the amount entered is too low, the button stays disabled and shows how much short you are.

Scanning a barcode

If an item sells in more than one unit, each unit can have its own separate barcode (set this up from Inventory — see Section 3). Scanning a Pack's own barcode adds a Pack to the cart directly, not a Piece — no need to manually switch the unit after scanning.

What happens to stock

Stock deducts automatically and correctly no matter which unit was sold. If you sell more of a small unit (like Pieces) than you have loose, the system automatically "opens" a larger sealed unit (like a Pack) and continues deducting — you never have to do this by hand.

TIP

Example: you have 10 Packs (1 Pack = 20 Pieces) and 10 loose Pieces. A customer buys 11 Pieces. The system deducts the 10 loose Pieces, opens 1 Pack (adding 20 Pieces), then deducts the remaining 1 — leaving you with 9 Packs and 19 Pieces.

3. Inventory

Add, edit, and manage your products

How to add a new item

1. Go to the **Inventory** tab and click **+ New Item** (or "Add to Manifest").
2. Type the item name — the SKU fills in automatically as you type (e.g. "Motor Oil" becomes MOT-000001). You can edit the SKU yourself at any point; once you do, it stops auto-updating.
3. Choose a Category and Zonal Location — both are optional and can be left blank.
4. Enter the Quantity currently in stock, and a Reorder Point.
5. Enter a Base Price (optional — leave blank if you don't track cost for this item) and the Selling Price (required).
6. Markup calculates automatically from those two numbers. It stays blank if Base Price is blank.
7. Optionally, link one or more Suppliers.
8. Click **Save**.

Selling the same item in more than one unit (Piece, Pack, Box)

1. While adding or editing an item, click **"+ This item also sells by the Pack or Box"**.
2. Name the unit (e.g. "Pack") and set how many base units make it up (e.g. "1 Pack = 20 Piece").
3. Enter that unit's own Base Price and Selling Price — these are independent of the Piece price, since buying in bulk often costs differently per piece.
4. Enter how many sealed Packs are physically on the shelf right now.
5. A separate barcode is generated automatically for this unit — different from the Piece barcode.
6. Repeat "+ Another unit" if you also sell by the Box/Case.
7. Click **Save**.

TIP Turning multi-unit off later folds any Pack/Box stock back into the plain Quantity number, so nothing is lost.

Setting a reorder point in Packs instead of Pieces

If an item has more than one unit set up, a unit dropdown appears next to the Reorder Point field. Set it to whichever unit makes sense for how you think about restocking — e.g. "reorder at 3 Pack" rather than always having to think in individual Pieces.

Editing or deleting an item

1. Click any item in the Inventory table to open it for editing.
2. Make your changes and click **Save**.
3. To delete an item entirely, open it and use the delete option inside the edit screen.

Receiving and issuing stock manually

1. Click the Receive/Issue icon next to an item (or scan its barcode while on this tab to jump straight there).
2. Choose Receive (stock coming in) or Issue (stock going out for a reason other than a sale).
3. Enter the quantity and a reason, then confirm.

4. Barcodes

Print and manage scannable labels

Every item — and every unit it sells in — gets its own separate, scannable barcode, generated automatically.

How to print or download labels

1. Go to the **Barcodes** tab.
2. Search or filter by category to find the items you need.
3. If an item sells in more than one unit, you'll see a separate label for each — e.g. "Coke Zero" and "Coke Zero (Pack)" — each with a different barcode.
4. Check the boxes next to the labels you want, or use **Select All**.
5. Click **Print Selected** to print directly, or **Download Selected** to save a PDF of label sheets.
6. Use **Print All** / **Download All** to do the same for every label currently shown.

TIP

Toggle "Show Selling Price" to include or exclude the price on printed labels.

5. Staff Inventory

Stock assigned out to your team

This tab shows inventory that's been handed off to staff members — stock they're responsible for, separate from your own master inventory.

Assigning stock to a staff member

1. Go to **Staff Inventory** and choose a staff member.
2. Pick the item(s) and quantity to assign from your own inventory.
3. Confirm — the stock moves out of your own inventory and into that staff member's.

Returning stock from staff back to your own inventory

1. Find the staff member and item in this tab.
2. Choose Return and enter the quantity being returned.
3. Confirm — the quantity moves back into your own inventory.

TIP

When staff use Point of Sale, they sell from their own assigned stock, not your master inventory. Their sales still appear in your overall Sales History.

6. Suppliers

Manage who you buy from

Adding a supplier

1. Go to **Suppliers** and click **+ New Supplier**.
2. Enter their name, contact details, and typical lead time (in days) — this is used to estimate delivery dates on Orders.
3. Click Save.

Suppliers are entirely optional throughout the app — items, Orders, and Restock records can all be created without one.

7. Categories

Organize items into groups

1. Go to **Categories** and type a new category name, then click **Add**.
2. To remove one, click delete next to it — this only works if no item in your current shop's inventory still uses it.

8. Zonal Locations

Track where stock physically sits

1. Go to **Zonal Locations** and add a location name (e.g. "A-01" or "Dock").
2. Assign a location to an item from the item's edit screen — this field is optional.
3. To remove a location, click delete — this only works if no item in your current shop's inventory still uses it.

9. Orders

Formal purchase orders placed with suppliers

Orders track stock you've formally ordered but haven't received yet — with a Pending / Received / Cancelled status. (For stock you've already received on the spot, see the Restock tab instead.)

Placing a new order

1. Go to **Orders** and click **+ New Order**.
2. Select the item you're ordering.
3. Choose a Supplier — or leave it as "No Supplier" if you're not ordering from anyone in your list yet.
4. Enter the Quantity and the Unit you're ordering in (Piece, Pack, etc.) — the Unit Cost auto-fills from that unit's own price, and can be edited.
5. Add any notes, then click **Place Order**.

Receiving an order

1. Find the pending order in the list and click **Receive**.
2. Stock is added automatically in the correct unit — e.g. an order for 3 Boxes adds 3 Boxes, not 3 loose Pieces.
3. The order status changes to Received.

Cancelling an order

Click Cancel next to a pending order. This does not affect stock, since nothing was received yet.

10. Restock

Log stock you've already received — no waiting

Unlike Orders, every entry in Restock represents inventory that has *already arrived*. There's no pending status — saving a restock updates your stock immediately.

Logging a restock

1. Go to **Restock** and click **+ New Restock**.
2. Select the item and the quantity received.
3. Choose which unit it arrived in (Piece, Pack, Box) — stock updates to that specific unit.
4. Enter the Unit Cost for this batch (it defaults to the item's current cost, but you can adjust it if this shipment cost differently).
5. Optionally select a Supplier, and add notes (e.g. a batch reference).
6. Click **Receive Stock**.

Restock Records

Every restock you've logged appears in a searchable, filterable table — by item, supplier, or date received — with CSV/PDF export.

11. Shops

Run more than one shop from a single account

If your business has more than one location or inventory, Shops lets you manage them all from one account — each with its own Products, Inventory, Sales history, Reports, and Profit calculations.

TIP Suppliers, Categories, and Zonal Locations are shared across all your shops — you don't need to set those up separately for each one.

Creating a new shop

1. Go to **Shops** and click **+ New Shop**.
2. Give it a name and save — you're automatically switched to it.

Switching between shops

Use the shop selector at the top of the sidebar (visible on every page), or the dedicated selector directly inside Point of Sale. Whichever shop is active determines what you see everywhere in the app — Inventory, Sales, Reports, Orders, Restock, all of it.

Renaming or deleting a shop

1. From the Shops page, click the pencil icon to rename, or the trash icon to delete.
2. You must have at least one shop — the last remaining one can't be deleted.

NOTE Deleting a shop does **not** delete its underlying items or sales — it just leaves them un-tagged to any active shop. Nothing is destroyed.

12. Sales History

Every completed sale, searchable and exportable

Finding past sales

1. Go to **Sales History**.
2. Use the quick filters — Today, This Week, This Month, This Year, or All Time — or set a custom date range.
3. Search by item name or SKU.
4. Click any sale to see its full receipt detail.

Managers can cancel or delete a sale from here if needed (this reverses the stock impact where applicable).

13. My Sales

A staff member's own sales history

Staff see only the sales they personally rang up here — this is their version of Sales History, scoped to just their own activity.

14. Restock Records / Delivery Tracking

Lead times and expected restocks

This tab tracks expected delivery timing per item and supplier — showing which items are On Track, due for Reorder, or Overdue, based on your suppliers' lead times and each item's reorder point.

Updating a status manually

1. Find the item in the list.
2. Click to set a manual status override, add a note, or set an expected order date.
3. Clear a manual override at any time to go back to automatic status detection.

15. Team Access & Approvals

Manage staff accounts and access

Adding a staff account

1. Go to **Team Access** and add a new staff member with an Inventory ID (staff sign in with this, not an email/password).
2. Set their role and permissions as needed.

New Client Admin sign-ups require approval — the **Approvals** tab is where a Super Admin reviews and approves pending accounts.

16. Activity Log

A record of who did what, and when

A chronological log of account activity across your tenant — staff creation, inventory changes, sales, price/markup changes, and more. Useful for auditing what happened and who was responsible.

17. My Profile

Your own account settings

1. Go to **My Profile** to update your name, contact details, or password.
2. Check your subscription status here if applicable.

That's every tab.

If something in the app doesn't match what's described here, or you run into anything unexpected, note the exact steps and it can usually be fixed fast.
